

Rectangular Rapid Flashing Beacon

OVERVIEW

The City of Frisco installed a new traffic control device called a Rectangular Rapid Flashing Beacon (RRFB) at the crosswalk leading to your school. The RRFB is intended to alert drivers that a pedestrian is ready to cross the street.

The RRFB uses bright yellow lights that flash when a pedestrian pushes the crosswalk button. The lights flash for a set amount of time that allows adequate time to cross the street. **If the RRFB is already flashing when you arrive at the corner, press the crosswalk button again** for it to start over and give you the proper amount of time to cross.

Always watch traffic and make sure cars are stopped before you cross. If you are crossing a street divided by a median, you can start crossing once cars stop on the half of the street closest to you. Once you reach the median, look at the cars coming from the other direction and wait for those cars to stop before you cross the rest of the street.

How to use the RRFB

Push the crosswalk button to activate RRFB lights.

Show your intent to cross by standing next to the street and look at the cars.

Wait for approaching cars to yield.

Look both ways and cross carefully.
